RefugePoint

<https://refugepoint.org/>

Very aligned on refugee protection and durable solutions, including Kenya programming.

Jesuit Refugee Service (JRS)

<https://www.jrs.net/>

Strong overlap on education, psychosocial support, and protection for displaced communities.

Windle International Kenya

<https://windle.org/>

Very relevant for refugee education and youth skills/employment in Kenya.

International Rescue Committee (IRC)

<https://www.rescue.org/>

Broad humanitarian model including protection, education, livelihoods, and GBV response.

HIAS

<https://windle.org/>

Known for refugee protection, legal support, and community-based response systems.

Danish Refugee Council (DRC)

<https://drc.ngo/>

Strong refugee-focused programming in protection and economic recovery.

Norwegian Refugee Council (NRC)

<https://www.nrc.no/>

Programs closely match education, shelter/protection, and livelihoods work.

FilmAid Kenya

<https://www.filmaid.org/>

Community-centered humanitarian approach in Kakuma and other refugee settings.

Lutheran World Federation Kenya-Somalia Program

<https://kenyasomalia.lutheranworld.org/>

Works in refugee contexts with protection and community resilience components.

AVSI Foundation

[i.org/https://www.avsi](https://www.avsi.org/)

Development + humanitarian model with education and livelihoods support in vulnerable communities.

Auth token for ngrok:

ngrok config add-authtoken 3EOI03kBIVqNfulsyY8FUgbUSPe\_2TzmvhVEjeRzcJKVq6hbM1

1. MPESA\_CALLBACK\_URL=<https://jailbreak-afar-confetti.ngrok-free.dev/api/donations/mobile-money/callback>
2. AIRTEL\_CALLBACK\_URL=<https://jailbreak-afar-confetti.ngrok-free.dev/api/donations/mobile-money/callback>

If you want real money to go from the donor directly into 0798406723, do not use the current STK setup as your main flow.

What STK does:

1. It prompts the donor's phone.
2. It sends money to a business shortcode or till.
3. It does not send money directly into the personal wallet of 0798406723.

For your exact goal, you have two realistic options:

1. Manual direct-pay flow
  - Show 0798406723 in the app as the M-Pesa recipient number.
  - Tell the donor to send money manually to that number.
  - Donor enters the M-Pesa transaction code in your form.
  - Your system saves the donation as pending or received after admin verification.

This is the simplest way to get real money into 0798406723.

2. Merchant collect plus payout flow
  - Donor pays your shortcode using STK.
  - After payment succeeds, your business account sends money out to 0798406723 using B2C or B2Pochi in production.
  - This is more complex and requires extra Safaricom production approvals.

So if your real target is just 0798406723, the correct move is:

1. Stop trying to route STK directly to that phone.
2. Change the app to a manual M-Pesa payment flow to 0798406723.
3. Keep transaction-code capture and admin verification.

I can implement that now:

1. Show 0798406723 as the pay number in the donor UI.
2. Remove the failing STK dependency from that path.
3. Make donor submit amount, sender number, and M-Pesa code.
4. Make admin confirm and mark payment received.

## PROJECT

I want to build a project where users will be Youth age of (25-30) vulnerable of not having job or any business after completing their secondary school

So the platform will be helping them like

Every one with the business idea that he always planed it they will be having their account on that platform where they will be creating their account and inside their profile they will be sharing their business idea and plan in order to be supported by some donors if the business plan makes sense or it is attractive to the donors

There must be

# Project Blueprint: "Growing Skills" (Empowerment Platform).

## 1. Executive Summary

**LaunchPad Youth** is a specialized digital ecosystem designed to bridge the gap between vulnerable, unemployed high school graduates (aged 25–30) and global philanthropic capital. The platform serves a dual purpose: it acts as an **interactive business incubator** for youth who lack formal business training, and a **transparent due-diligence pipeline** for donors looking to fund micro-enterprises with high social returns.

## 2. Core Value Propositions

### For the Vulnerable Youth (The Entrepreneurs)

- **Democratized Access to Capital:** Removes the barrier of traditional collateral required by banks, substituting financial history with validated business potential.
- **Built-in Business Literacy:** The platform doesn't just ask for a plan; it *teaches* them how to build one using intuitive, localized micro-steps.
- **Economic Visibility:** Gives voice and presence to marginalized individuals who are otherwise invisible in the formal job market.

### For Philanthropists & Institutional Donors

- **Unprecedented Transparency:** Every dollar pledged can be tracked dynamically through milestone-based verification.
- **De-Risked Philanthropy:** Field administrators vet ideas for basic viability *before* they appear on the dashboard, saving donors time and minimizing fraud.
- **Direct Impact Metrics:** Donors receive real-time data on how their funding translates into active employment, local supply chain growth, and community poverty reduction.

## 3. High-Fidelity Operational Pipeline

To ensure the platform is highly secure and operational, the workflow is split into four distinct phases:

Plaintext

1. **Guided Onboarding:** The youth user signs up and passes through a strict but simple demographic validation system (verifying age, location, and education status).

2. **Community Vetting:** The user utilizes the **Step-by-Step Business Plan Builder**. Local platform admins review the draft, offer constructive feedback, and approve it for the public marketplace once it meets minimum criteria.
3. **Match & Funding:** Donors browse an interactive, categorical catalog of verified youth businesses. They can choose to fund a project entirely or crowdfund it alongside other donors.
4. **Milestone Disbursement:** Funds are securely locked in escrow and released incrementally based on verified proof of operational execution.

## 4. Advanced Technical Features for a Professional Product

To stand out as a professional-grade platform, your application should implement these unique technical mechanisms:

### A. The "Milestone Escrow" System (Trust Engine)

Instead of disbursing a \$1,500 grant all at once, the system breaks the funding into specific, trackable operational stages:

- **Milestone 1 (Setup):** 30% released to secure a business space or register a license. The user must upload a photo of the receipt or a verified geolocation check to the app.
- **Milestone 2 (Inventory):** 40% released for raw materials or equipment purchases.
- **Milestone 3 (Launch):** Remaining 30% released for operational marketing and initial runway.

### B. Impact Scorecard Dashboard

A beautiful, data-driven visualization panel for donors. When a donor logs in, they don't just see a receipt; they see charts showing metrics such as:

- *Total jobs created within this demographic.*
- *Success rate of businesses funded in a specific sector (e.g., sustainable farming, tailoring).*
- *Regional economic growth heatmaps.*

### C. Offline-First Mobile Design

Because your core target demographic may suffer from erratic internet connectivity or expensive mobile data, the frontend application should be engineered as a **Progressive Web App (PWA)**. This allows youth to write, edit, and save their entire business plan offline in their browser, automatically syncing it to your Node.js backend the exact moment they find a stable internet connection.

## 5. Strategic Risk Mitigation (What Donors Look For)

| Identified Risk                     | Platform Mitigation Strategy                                                                                                                             |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Fraud/Misuse of Funds</b>        | Implementation of the Milestone System combined with a required upload of proof-of-purchase receipts before unlocking subsequent funding tiers.          |
| <b>Business Failure</b>             | Integrating a mentorship layer where senior business students or retired professionals can volunteer to review and guide the youth through the platform. |
| <b>Identity Theft/Fake Profiles</b> | Mandatory National ID, secondary school completion certificate uploads, and automated facial recognition/selfie validation during signup.                |
